QUICKSTART GUIDE SERIES

## PUBLISHING FORMS TO YOUR WEBSITE

Integrating your new form into your site is quick, easy, and best of all, seamless. Logiforms generates the code for you. All you have to do is copy and then paste it into your site. There are four different integration options at your disposal, just choose the best fit for your site.

# FORM DESIGNER QUICK START GUIDE

## GETTING STARTED

Before you can access the Integration Wizard for a form you need to first select the form you want to publish. **Click the "Component Menu" Icon shown here to load your main menu.**

**A** Browse your project folders and click the form you want to activate.

**B** An overview of the selected form will load in the right side window shown here. The component details window contains key information about your form. **Note the direct link to your form. You can click this to open your form in a new window**

Welcome to your logiforms.com account logiforms.  
Displayed below are all of your active logiforms.com components. From this menu you can edit/explore and work with any of your components. This is the main menu which provides you with centralized access to all of your tools.

Component Details	
<b>Sample Membership Form</b>	
Edit Form   View Submissions   Delete   Duplicate   Move to New Folder   Import Data	
Date Created:	06/01/05
Last Modified:	06/01/05
Direct Link:	<a href="#">Open Form URL</a>
Form Type:	Standard Form
Submissions:	
Password:	N/A
Encrypted Fields:	No Encrypted fields
SSL Encryption:	Not Enabled
Form Fields:	10

### NAVIGATION TIP

Once you activate a component, as shown above, the Toolbar Menu will become available. Roll over the Integration Wizard Icon in the Toolbar to reveal the Toolbar Submenu and the 4 different integration options.

Form Tools	Data Management	Integration	Email Tools

## INTEGRATION OPTION #1 - EMBEDDED

This option embeds the form in an Iframe on your web page. Because Logiforms is hosting your form, any changes made to your form via Logiforms web system will be reflected on your site.

**A** Enter the frame width, height and whether or not to include scrolling. Enter window properties for the pop-up window for older versions of Netscape (see next page for pop up window settings). The default settings are generally a good guideline for the Iframe size.

**B** Clicking Continue will generate the code for your form. This code can be copied and pasted into the body of your web page.

**Embedded Frame Settings**

The Iframe settings apply to the window that will be embedded within your pages. Note: When using SSL forms, this option will not show the secure icon in the web browser. This is because the page the form is on is secure, but the page that has the frame embedded (your page) is not secure. Use the pop up window option instead to display the Secure padlock icon.

Width:

Height:

Allow Scrolling:

**Pop up window settings**

Users of older netscape browsers (4.x) will see a link that triggers a pop up window. The embedded Iframe method is not supported on these older browsers. These settings allow you to configure the pop up window settings.

Window Width:

Window Height:

Window Left:

Window Top:

Window Toolbar:

Window Statusbar:

Window Scrolling:

Allow Window Resizing:

Link Text:

**Note 1:** Netscape 4.x and older do not support Iframes, and will not embed the form into your page. It will instead create a link to a pop-up window that contains your form.

**Note 2:** Your page will NOT display the secure padlock icon when using the Embed integration option with Secure Forms. Your form IS still secure, but because your non-secure page is holding it, the padlock will not be displayed.

**Integration Code Generation Complete**

Cut & paste this code into the body of your webpage to display your form.

```
<!-- logiforms.com code - cut an paste this code into anywhere on your page -->
<IFRAME SRC="http://www.logiforms.com/formdata/user_forms/243_1802639/25481/" HSPACE="2" VSPACE="2"
NAME="win24325481" SCROLLING="auto" WIDTH="600" HEIGHT="500" MARGINWIDTH=5 MARGINHEIGHT=5
FRAMEBORDER="0"></IFRAME>
```

# FORM DESIGNER QUICK START GUIDE

## INTEGRATION OPTION # 2 - POP UP WINDOW

This option displays your form in a pop-up window. Logiforms is hosting your form, so any changes made on Logiforms web system will be reflected immediately on your form.

- A** Select the window properties and enter the text that should appear as a link to this window.
- B** Clicking Continue will generate the code for your form. This code can be copied and pasted into the body of your web page.

**Pop Up Window Settings**

This integration option will generate code to pop open a window with your form inside the new window. This option is a good choice to use with secure forms. When using secure forms, Integration Option #1 will not display the secure form icon because it is in a frame on a page that is not secure. The pop up window WILL show the secure icon.

**A**

Window Width:	<input type="text" value="600"/>
Window Height:	<input type="text" value="400"/>
Window Left:	<input type="text" value="20"/>
Window Top:	<input type="text" value="20"/>
Window Toolbar:	<input type="text" value="no"/>
Window Statusbar:	<input type="text" value="no"/>
Window Scrolling:	<input type="text" value="yes"/>
Allow Window Resizing:	<input type="text" value="no"/>
Link Text:	<input type="text" value="Click here to open the window"/>

**Note 2:** This is a good choice when using SSL encrypted forms. The pop up window will show the padlock icon indicating the SSL encryption.

**Integration Code Generation Complete**

Cut & paste this code into the body of your webpage to display your form.

**B**

```
<!-- logiforms code - cut an paste this code into anywhere on your page -->
<A HREF="#" onClick="window.open
('http://www.logiforms.com/formdata/user_forms/243_1802639/25481', 'win24325481', 'toolbar=no,width=600,height=400,left
=20,top=20, screenX=20,screenY=20,status=no,scrollbars=yes, resizable=no');return false">Click here to open the
```

## INTEGRATION OPTION # 3 - DIRECT LINK

- A** This option allows you to link directly to the form, hosted on our servers. This option is convenient if you do not have your own website or can not easily make changes to it. You can simply use the direct link provided.

<p><b>Direct Link Integration Option</b></p> <p>Use the link displayed here to access your form directly. The direct link options is also a convenient way of testing your form prior to deployment.</p>	<p><b>A</b></p> <p><b>Web Form Link</b></p> <p>Use this link to link to your form.</p> <p><a href="http://www.logiforms.com/formdata/user_forms/243_02639/25481/">http://www.logiforms.com/formdata/user_forms/243_02639/25481/</a></p>
--	---

## INTEGRATION OPTION # 4 - ADVANCED

- A** This option is intended for users with a basic understanding of HTML. Using this option you can cut & paste the entire form code onto your website. Use this option to further customize the display of your form and achieve seamless integration with your website. You can also use this option to edit your forms appearance further within your favorite HTML editor. **Note: SSL is not supported when moving the form code to your server using this option**

**Advanced Integration Option**

The code below is the entire html page containing your form. **This option is intended for people with a good understanding of html.** It is important to note that you may not change any of the form elements. Removing or changing the names of form elements will render this form unusable. This includes the hidden fields.

Unlike the other integrated options, if you update your form at logiforms, your form will not be automatically updated. You will need to repeat this process whenever changes to your form are made for those changes to appear on your website.
